Full Stack Software Engineer focused on scalable systems, solution architecture, and complex integrations. Holds a Bachelor's degree in Software Engineering from PUC Campinas and an MBA in Solution Architecture from FIAP, with academic focus on enterprise architecture, TOGAF, microservices, multicloud, security, data architecture for GenAI, and the strategic use of AI in corporate environments.

Has worked for several years in technology consulting, delivering solutions across different business contexts, ranging from white-label platforms and marketplaces to enterprise architectures, legacy integrations, APIs, process automation, and high-reliability systems. Builds applications with Angular, Vue.js, Laravel, Python, and TypeScript, with a strong focus on performance, code quality, and sustainable product evolution.

In day-to-day engineering work, applies AI tools and practices to accelerate development, review, and documentation, always with human validation, proper governance, and attention to confidentiality. Also works on frontend development with Angular, including landing pages focused on performance, SEO, componentization, accessibility, and analytics.

Professional Experience

Software Engineer at levva

July 2025 – Present

- Currently working on a financial sector project focused on frontend development with Angular and Liferay DXP
- Developing landing pages focused on performance, SEO, componentization, responsiveness, and analytics integration
- Structured reusable components and design system integration, ensuring consistency and scalability across pages
- Built integrations with APIs and forms with robust validation, supporting conversion flows and reliable data capture
- Using AI-assisted practices in the engineering workflow to improve productivity, review, and documentation, without disclosing sensitive client information
- Previously developed an Agricultural Machinery Insurance module in a full stack architecture using Laravel/PHP, Angular, and legacy system integrations
- Automated bidirectional synchronization with legacy systems, eliminating around 20 hours per week of manual work
- Implemented a multi-tenant architecture with licensing, regional business rules, and support for multi-year insurance policies
- Built a quotation system with configurable draft expiration and automations, reducing data loss by 40%
- Developed 40+ REST endpoints documented with Swagger/OpenAPI and optimized Azure CI/CD pipelines, reducing build time by 40% and memory usage by 50%

Junior Software Engineer at Encora Inc.

January 2023 – April 2025

- Developed full stack solutions for a global academic exchange platform
- Designed and implemented REST APIs using Python, FastAPI, SQLAlchemy, and PostgreSQL
- Built modern interfaces with Vue.js and TypeScript, with a focus on user experience and accessibility
- Refactored legacy Laravel systems, improving performance and maintainability
- Implemented automated tests with Pytest and Playwright
- Participated actively in code reviews and technical architecture decisions

Software Development Intern at Encora Inc.

February 2021 – January 2023

- Developed internal corporate solutions with Node.js, Python, Vue.js, and React
- Implemented APIs and integrations with PostgreSQL and MySQL
- Built responsive web applications focused on usability and maintainability
- Produced technical documentation with Swagger, improving integration and onboarding
- Helped standardize repositories and engineering practices

Software Development Intern at OpaBox

June 2019 – February 2021

- Developed white-label solutions for B2C e-commerce platforms
- Built web and mobile applications with Vue.js and Flutter
- Implemented serverless APIs with Node.js and AWS
- Integrated external services for payments, logistics, and CRM
- Customized flows and interfaces for multiple client needs

Software Development Intern at SuperOpa

June 2019 – February 2021

- Developed a marketplace platform using Vue.js for web and Flutter for mobile
- Built microservice-based APIs with Node.js
- Integrated AWS services including Lambda, API Gateway, SQS, CloudWatch, and DynamoDB
- Produced technical documentation and collaborated with product and business teams
- Worked in a startup environment focused on fast delivery and continuous product evolution

Education

FIAP

Postgraduate Lato Sensu – MBA in Solutions Architecture | *April 2025 – April 2026 (in progress)*

Focused on enterprise and solution architecture, TOGAF, microservices, enterprise integration, multicloud, FinOps, security, data architecture for GenAI, and the strategic use of generative AI in architecture.

Pontifícia Universidade Católica de Campinas

Bachelor's Degree in Software Engineering | *2019 – 2023*

Comprehensive education in software development, data structures, requirements engineering, code quality, agile methodologies, and DevOps practices.

Escola Técnica Estadual "Bento Quirino"

Integrated Technical Program in Computer Science | *January 2016 – December 2018*

Practical training in programming logic, web development, computer networks, databases, and operating systems.

Language

English - Advanced

Spanish - Technical / Basic

Portuguese - Native

Additional information

Exchange Program – Canadian College of English Language (CCEL)

July 2022 – Vancouver, Canada

Intensive English course focused on technical language and professional oral communication in international environments.

Technical Skills

Frontend

Angular, Vue 3, React, Next.js, Nuxt.js, TypeScript, JavaScript, HTML, CSS, Sass

Backend

Python (FastAPI), PHP (Laravel), Node.js (Express), Java

Architecture and APIs

Microservices, Serverless, Clean Architecture, DDD, Event-Driven Architecture, TOGAF, BPMN, REST, GraphQL, gRPC, OpenAPI/Swagger, Service Layer, Repository Pattern, Observer Pattern

Cloud, DevOps, and Infrastructure

AWS, Azure, Firebase, GCP, Docker, Kubernetes, Terraform, Linux, PM2, GitHub Actions, GitLab CI, Jenkins, Azure Pipelines

Data, streaming, and messaging

PostgreSQL, MySQL, SQLite, MongoDB, DynamoDB, Firestore, Redis, Kafka, SQLAlchemy, Eloquent, Prisma

AI, analytics, and automation

Generative models and LLMs in engineering workflows, RAG and knowledge bases, MCP-based integration, ML applied to products, AI-assisted automation, and data analysis for decision-making.

Testing, quality, and observability

Pytest, PHPUnit, Jest, Playwright, Cypress, Testing Library, Postman, Insomnia, Datadog, Sentry, CloudWatch

Management, documentation, and design

Git, GitHub, GitLab, Jira, Trello, Confluence, Notion, Figma, Scrum, Kanban, Swagger/OpenAPI, technical documentation, and code review
