GitHub: github.com/gabireze

Professional Summary

Senior Software Engineer with experience since 2019 developing enterprise systems, web applications, APIs, complex integrations, and scalable solutions. Holds a Bachelor's degree in Software Engineering from PUC Campinas and an MBA in Solution Architecture from FIAP.

Frontend and full stack experience with React, Angular, TypeScript, .NET, Python, Laravel, and Node.js, including modular architecture, distributed systems, legacy integrations, automated testing, and CI/CD.

Experienced in AI-native engineering, using AI agents, BMAD, specialized skills, and Model Context Protocol (MCP) throughout the development lifecycle, from requirements analysis and architecture to implementation, testing, review, and documentation.

Professional Experience

Levva

Senior Software Engineer

August 2026 – Present | Remote

Working on a project for GoodStorage, contributing to the development of an internal enterprise platform focused on digitizing and evolving operational processes. The solution combines a modular .NET architecture, a React frontend, and an AI-native engineering approach.

- End-to-end feature development, primarily focused on frontend engineering with React, TypeScript, Vite, and React Query. Building complex interfaces, reusable components, and forms with React Hook Form and Yup, using shadcn/ui, Radix UI, and CSS Modules.
- API integration through a BFF layer and collaboration within an ecosystem based on ASP.NET Core, .NET Aspire, PostgreSQL, Redis, RabbitMQ, and event-driven architecture. Participation in technical refinements, code reviews, engineering standards, and architectural decisions.
- Working in an AI-native workflow where agents support requirements analysis, specifications, planning, architecture, implementation, testing, review, documentation, QA, and retrospectives. BMAD is used to transform business needs into technical artifacts and structured deliverables.
- Using and evolving agents contextualized through project rules, specialized skills, documentation, and structured specifications. MCP integrations connect agents to tools and context sources, while automated testing, human validation, and technical review support delivery quality.

Levva

Mid-Level Software Engineer

July 2025 – August 2026 | Remote

Worked on consulting projects for clients in the financial and insurance sectors, contributing to requirements analysis, technical refinement, solution design, development, integration, and the evolution of enterprise systems.

Client: B3

- Developed enterprise interfaces, landing pages, and digital experiences using Angular and Liferay DXP, translating business and design requirements into responsive, performant, and reusable solutions.
- Structured design system components and implemented forms, validations, and API integrations supporting conversion flows, institutional communication, and data capture, including SEO, analytics, and performance optimization.
- Contributed to the evolution of the frontend architecture and responsibly used AI to support analysis, development, code review, and documentation.

Client: Alper Seguros

- Full stack development of an Agricultural Machinery Insurance module using Angular, Laravel/PHP, and REST APIs, covering interfaces, business rules, data persistence, and external integrations.
- Implemented bidirectional synchronization with a legacy system, eliminating approximately 20 hours of manual work per week, as well as a multi-tenant architecture with licensing, regional configurations, and support for multi-year insurance policies.
- Built a quotation system with drafts, configurable expiration, and automation, reducing data loss by 40%. Developed more than 40 REST endpoints documented with Swagger/OpenAPI.
- Optimized the Azure CI/CD pipeline, reducing build time by 40% and memory usage by 50%.

Encora Inc.

Junior Software Engineer

January 2023 – April 2025

Worked on a project for Academic Programs International, a U.S.-based international education company, contributing to platforms for managing study abroad programs, international internships, and educational experiences.

- Developed and integrated REST APIs using Python, FastAPI, SQLAlchemy, PostgreSQL, and Alembic within a microservices architecture.
- Developed frontend features with Vue.js, Composition API, JavaScript, and TypeScript, creating interfaces integrated with the platform's APIs and business workflows.
- Maintained and modernized legacy PHP/Laravel systems, integrating them with modern services and continuously improving the codebase.
- Managed environments with Docker and Docker Compose and developed automated tests with Pytest and Playwright.
- Implemented search experiences with Algolia and participated in technical refinements, code reviews, engineering standards, and architectural decisions.

Encora Inc.

Software Engineering Intern

February 2021 – January 2023

- Developed REST APIs with Node.js and Python/FastAPI, integrated with PostgreSQL and MySQL.
- Implemented authentication and business logic using Firebase Auth, Realtime Database, and Firestore.
- Developed applications with Vue.js and React, documented APIs with Swagger, and contributed to code and repository standardization.

OpaBox and SuperOpa

Software Engineering Intern

June 2019 – February 2021

Shared internship across projects from companies within the same operational group, contributing to white-label solutions, B2C e-commerce platforms, and a multi-industry marketplace.

- Developed web applications with Vue.js and mobile applications with Flutter, reusing components across different products and clients.
- Developed serverless APIs and microservices using Node.js, AWS Lambda, API Gateway, SQS, CloudWatch, and DynamoDB.
- Implemented external integrations and customized workflows while collaborating with product, design, and commercial teams in a fast-paced delivery environment.

Education

FIAP

MBA in Solution Architecture | April 2025 – April 2026

Coursework focused on enterprise and solution architecture, TOGAF, microservices, enterprise integration, multicloud, FinOps, security, GenAI data foundations, and the strategic use of generative AI.

Pontifical Catholic University of Campinas

Bachelor's Degree in Software Engineering | 2019 – 2023

Canadian College of English Language — Vancouver, Canada

Academic Exchange Program | July 2022

Intensive English program focused on spoken communication and the use of English in academic and professional environments.

Technical Skills

Frontend: React, Angular, Vue.js, TypeScript, JavaScript, Vite, React Query, React Hook Form, HTML, CSS, and Sass.

Backend: .NET, ASP.NET Core, Python, FastAPI, PHP, Laravel, Node.js, and REST APIs.

Architecture: Modular architecture, microservices, distributed systems, event-driven architecture, DDD, serverless, BFF, OpenAPI, and Swagger.

Cloud and DevOps: Azure, AWS, Docker, CI/CD, GitHub Actions, Azure Pipelines, Kubernetes, and Terraform.

Data and messaging: PostgreSQL, MySQL, Redis, RabbitMQ, Kafka, DynamoDB, and Firestore.

AI and automation: AI-native engineering, AI agents, BMAD, specialized skills, MCP, generative models, LLMs, RAG, and knowledge bases.

Testing and quality: Vitest, Testing Library, Playwright, Pytest, PHPUnit, Cypress, code review, and technical documentation.
